Component Cleaning Cabinet

providing a highly cost
effective method of
maintaining clean air and
removing particle residue
in the workplace

Cleaning Cabinet

The Filtermist Component Cleaning Cabinet quickly and effortlessly removes metalworking fluids left over from the manufacturing process. Using a simple foot operation to activate the extraction system, the fluid is collected in the internal container.

A powerful airgun enables efficient cleaning of the component and only operates if the extraction unit is working, preventing harmful fluids being propelled into the working environment. A simple connection to an existing air supply is all that is required for installation (no electricity needed), making the unit extremely versatile and easy to position in the workshop.

Cleaning Cabinet Product code: CAB500

Pressure:	6 bar (88psi)
Airflow:	750 l/min (27cfm)
Max Workholding Weight:	10kg
Weight:	44kg
Construction:	Mild Steel Powder Coated
Colour:	Dark Grey
Air connection:	1/4" Female BSPT Elbow

- Captures coolant and detergent mist.
- Highly cost effective.
- Efficient component cleaning.
- No electricity supply needed.
