## Filtermist dust extraction from the workplace

Offering a range of mechanically shaken and jet cleaned, static and mobile filter systems

### High efficiency

The Filtermist range of mobile and stationary dust extraction units offer a cost effective solution to a multitude of applications in the workplace, where the efficient removal of dust and small particles is required.

### Easy to operate and maintain

All models are easy to operate, simple to maintain and are easily sited. Quick access to the filter elements allows for ease of cleaning and maintenance, ensuring efficient operation and longevity of the system.

### All types and sizes of application

Mobile units are ideal for frequently changing extraction locations within the plant. Due to their compact design they are easy to move and provide flexibility in any operation. Static systems provide extraction solutions for larger machines or manufacturing workshops, with central extraction systems up to 100,000m<sup>3</sup>h.

### Economy and reliability

All models are energy efficient offering low running costs overall and all Filtermist models have an enviable reputation for both reliability and performance. This combined with the Filtermist service and spares support service, ensures you should enjoy peace of mind along with efficient operation for many years to come.

### Explosion protection

Fire and explosion hazards are present in all industrial plants that generate, store or transport flammable types of dust. Filtermist offers a wide range of ATEX\* rated extractors and services that will ensure a safe workplace environment with reliable protection from dust explosions.

\*ATEX is the new EU-directive which defines explosion and personnel protection requirements for production facilities and operators, together with requirements for products and manufacturers in the workplace. This directive has been a mandatory requirement in Europe since 1st July 2006.

- Effective removal of dust and other particles from workplace.
- Fixed or compact mobile units for complete flexibility.
- Easy to operate, clean and maintain.
- High performance and reliability.
- Protection against hazardous dust explosions.
- Energy efficient with overall low running costs.
