offering a total
package to maintain
optimum performance

Preventative maintenance and repair

The Filtermist maintenance programme covers all makes and types of filtration units. Regular servicing and replacement of any specialist consumables is provided to ensure that product performance is maintained at peak levels. The service is designed to offer a genuine and cost effective preventative maintenance regime to ensure trouble free operation.

Always fit Filtermist parts

Filtermist products are precision engineered to achieve maximum filtration efficiency with minimum noise and maximum reliability. Every component has been carefully evaluated for its individual performance and to work precisely with other components. Even the foam filters are manufactured to a precise specification and if replaced with an inferior product, overall filtration performance will be greatly impaired. If you undertake your own maintenance of Filtermist products, to ensure that optimum performance is maintained always order genuine replacement parts from Filtermist. A full range of spares are held in stock for next day delivery.

Complete peace of mind

A comprehensive, no quibble equipment warranty is complemented by the availability of an extended warranty programme. This is linked to the Filtermist maintenance agreement or full system warranty.

A total support service and spares for oil-mist collectors, electrostatic filters and dust filters.

- Maintains product performance at peak levels.
- Technical support and advice.
- Cost effective preventative maintenance.
- No quibble warranty to maintain agreed performance.
- Next day delivery on filters and spares.

Our policy is one of continuous improvement and we reserve the right to change our specifications and prices without notice. 10/04
