

# Proudly Delivering Clean Air for the Global Aerospace & Defence Industry

Filtermist oil mist collectors help aerospace & defence manufacturers and engineers remain compliant with local legislation, protect the health and safety of their employees, support continuous production, and achieve mission critical productivity levels.

Effective oil mist extraction can:

- Support adherence to AS9100 requirements
- Reduce the cost of worker sick leave and absence cover
- Help to prevent damage to sensitive electronic equipment including machine control panels
- Maintain component quality and lower wastage costs by ensuring an ambient temperature inside the enclosure
- Lower cleaning bills by reducing oily deposits on walls and floors
- Help to win new business through high standards of cleanliness
- Reduce coolant costs by recycling where possible

Filtermist oil mist units are also suitable for aerospace and defence specific applications including dry-cranking and preservation of jet engines, engine remanufacturing, as well as marine applications such as turbine bearings and oil tanks which can all result in airborne mist particles which can have costly implications if left in the atmosphere.

**Local support in more than 60 countries worldwide**

Air Care Group

Protecting People  
Cleaner, safer, more  
productive workshops

# Full flexibility

Filtermist oil mist collectors can be mounted in a number of ways - offering full flexibility for aerospace manufacturers that may need to reconfigure their workshop layouts, or add in more machines depending on changing production requirements.

- Direct Mount
- Machine Tool Stands
- Floor Stands
- Wall Brackets
- Horizontal Inlet Plenum Option

Filtermist is trusted by many world-leading aerospace & defence manufacturers to effectively remove oil and coolant mist, fume and steam from workplace air.
